SIUS

CommServiceManager

The CommServiceManager controls and shows detailed status information of the SiusCommService. The SiusCommService can be started and stopped from the CommServiceManager.

Status of SiusCommService

Shows the actual status of the SiusCommService, whether he is running or stopped.

This icon shows the status of the SiusCommService. It can be running (green) or stopped (red).

2 Start / Stop

June 2014

Start Service

Stop Service

Starting and stopping of the SiusCommService.

During the startup the SiusCommService scans for the connected devices and presents them under "Application".

Duration:

00:05:40

Shows the run time of the SiusCommService.

Tcp/ lp Port

Port:

4200

Shows the port number for the communication between SiusCommService and the connected applications.

Remote Server

Remote Server Name: Remote Server Port: CommService-RemoteServer 8085

Shows name and port of the server, which is responsible for the communication between CommServiceManager and SiusCommService.

Shows how many packets are sent to the SiusCommService and how many are distributed to the connected applications.

Click on the button to get the help file.

If a connected device is found after the startup scan and this device loses their connection to the SiusCommService, the connection quality shows "Disconnected". With "Search Devices" all the disconnected devices will be reconnected after a successful search.
